Description

The iDTRONIC BLUEBOX Access Control Gate UHF is a high performance solution for access control applications. It is equipped with the BLUEBOX UHF Long-Range 4CH. The switching between the single antennas can then be managed with the integrated multiplexer and the Controller SW.

Each antenna panel has two circular polarized antennas for enabling 3D tag reading independent from the orientation of the tag. The recommended clearance between the 2 panels is < 2m. Thanks to the ethernet interface it is easy to integrate this portal into the network. A RS232 version is also available.
